

Best practices in agricultural value chains

Improving productivity, reliability and resilience to climate change

Organised by Farming First
World Forum, The Hague, Netherlands
Wednesday, 3 November, 2010
13:00-15:00, "Room Yangtze 2"

The event will present existing initiatives that aim to increase resilience and productivity at different points in the value chain. The purpose is to provide examples of initiatives that could be scaled up. Increasing productivity, minimising waste, increasing efficiencies in production and transport of food can all contribute to increased food security and to mitigate and adapt to climate change.

The event will mix a panel discussion and videos.
